WALCOM, March 2023

# Set Packing

Given

a universe  $\mathcal{U}$

a collection of sets  $\mathcal{S}$  over  $\mathcal{U}$

a positive integer  $r$

Decide if  $\mathcal{S}$  has  $r$  sets that are pairwise disjoint

# Set Packing

Given

a universe  $\mathcal{U}$

a collection of sets  $\mathcal{S}$  over  $\mathcal{U}$

a positive integer  $r$

Decide if  $\mathcal{S}$  has  $r$  sets that are pairwise disjoint

$r = 2$

# Set Packing

Given

a universe  $\mathcal{U}$

a collection of sets  $\mathcal{S}$  over  $\mathcal{U}$

a positive integer  $r$

Decide if  $\mathcal{S}$  has  $r$  sets that are pairwise disjoint

$r = 3$

NO

# Set Packing

Given

a universe  $\mathcal{U}$

a collection of sets  $\mathcal{S}$  over  $\mathcal{U}$

a positive integer  $r$

Decide if  $\mathcal{S}$  has  $r$  sets that are pairwise disjoint

$(\mathcal{U}, \mathcal{S})$  is called Set System

Also called  $r$ -packing

# Set Packing

Given

a set system  $(\mathcal{U}, \mathcal{S})$

a positive integer  $r$

Decide if  $\mathcal{S}$  has  $r$ -packing

Hard in almost every regime

# Set Packing

FPT approximation is hard

a set system  $(\mathcal{U}, \mathcal{S})$

“Trivial algorithm” is best hope

Decide if

$W[1]$ -hard

Hard in almost every regime

NP-hardness

Hard even when set has 3 elements

Hard to approximate

# Set Packing

Hard in almost every regime

FPT approximation is hard

NP-hardness

a set system  $(\mathcal{U}, \mathcal{S})$

"Trivial algorithm" is better

Hard even when set has 3 elements

$W[1]$ -hard

Decide if  $\mathcal{S}$  has  $r$ -packing

Hard to approximate

# Parameterized Set Packing (PSP)

Given

a set system  $(\mathcal{U}, \mathcal{S})$

a positive integer  $r$

Parameter:  $r$

Decide if  $\mathcal{S}$  has an  $r$ -packing

in time  $g(r)poly(|\mathcal{U}|, |\mathcal{S}|)$

# Parameterized Set Packing (PSP)

Given

a set system  $(\mathcal{U}, \mathcal{S})$

a positive integer  $r$

Parameter:  $r$

Decide if  $\mathcal{S}$  has an  $r$ -packing

# Parameterized Set Packing (PSP)

Given

a set system  $(\mathcal{U}, \mathcal{S})$

a positive integer  $r$

Parameter:  $r$

Decide if  $\mathcal{S}$  has an  $r$ -packing

$W[1]$ -hard

No algorithm in time  
 $g(r)poly(|\mathcal{U}|, |\mathcal{S}|)$

# PSP on “small” universe

Given

a set system  $(\mathcal{U}, \mathcal{S})$

a positive integer  $r$

Parameter:  $r$

$$|\mathcal{U}| = f(r)\Theta(\log |\mathcal{S}|)$$

Decide if  $\mathcal{S}$  has an  $r$ -packing

# PSP on “small” universe

Compact PSP

Given

a set system  $(\mathcal{U}, \mathcal{S})$

a positive integer  $r$

Parameter:  $r$

$$|\mathcal{U}| = f(r)\Theta(\log |\mathcal{S}|)$$

Decide if  $\mathcal{S}$  has an  $r$ -packing

Previous  $W[1]$ -hardness does not hold here

# Why Compact PSP?

Algorithmic motivation...

Compact problems used as “intermediate step”  
to prove FPT inapproximability

Conceptual understanding...

Compact Set Cover

Compact Vector-Sum

# Our results

Dichotomy result:

PSP is  $W[1]$ -hard when  $|\mathcal{U}| = r \Theta(\log |\mathcal{S}|)$

PSP is in FPT when  $|\mathcal{U}| = f(r) o(\log |\mathcal{S}|)$

# Our results

Dichotomy result:

PSP is  $W[1]$ -hard when  $|\mathcal{U}| = r \Theta(\log |\mathcal{S}|)$

PSP is in FPT when  $|\mathcal{U}| = f(r) o(\log |\mathcal{S}|)$

Compact PSP

Follows from known  
dynamic programs

# Our results

Assuming ETH, no  $|\mathcal{S}|^{o(r/\log r)}$  time algorithm for Compact PSP

Recent result of Chu '23 rules out time  $|\mathcal{S}|^{o(r)}$

Similar ETH hardness for Compact Vector Sum

# Today...

$W[1]$ -hardness of Compact PSP

Alternate and simpler proof

**Caveat:**

yields a weaker ETH hardness result

Show a reduction from  $k$ -Clique problem to Compact PSP

**Paper:**

Subgraph Isomorphism to Compact PSP

# $k$ -Clique Problem

Given a graph  $G = (V, E)$  and a positive integer  $k$ , decide if  $G$  has a  $k$ -clique.

$G = (V, E)$

$k = 3$

# $k$ -Clique Problem

Given a graph  $G = (V, E)$  and a positive integer  $k$ , decide if  $G$  has a  $k$ -clique.

$G = (V, E)$

$k = 3$

# $k$ -Clique Problem

Given a graph  $G = (V, E)$  and a positive integer  $k$ , decide if  $G$  has a  $k$ -clique.

$G = (V, E)$

$k = 3$

Equivalently...

# $k$ -Clique Problem

Given a graph  $G = (V, E)$ ,  $k$ , and a  $k$ -clique  $H = (W, F)$   
decide if  $G$  has an isomorphic copy of  $H$ .

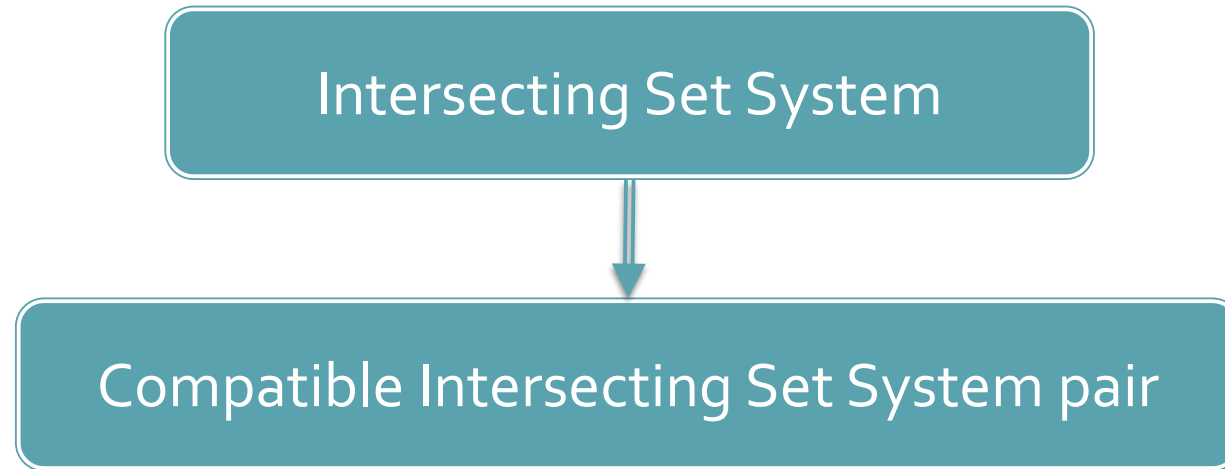

$G = (V, E)$

$H = (W, F)$

$$k = 3$$

# Compatible ISS pair

$A = (\mathcal{U}, \mathcal{S}_A)$  and  $B = (\mathcal{U}, \mathcal{S}_B)$  are ISS on same universe  $\mathcal{U}$

# Compatible ISS pair

$A = (\mathcal{U}, \mathcal{S}_A)$  and  $B = (\mathcal{U}, \mathcal{S}_B)$  are ISS on same universe  $\mathcal{U}$

# Compatible ISS pair

$A = (\mathcal{U}, \mathcal{S}_A)$  and  $B = (\mathcal{U}, \mathcal{S}_B)$  are ISS on same universe  $\mathcal{U}$

# Compatible ISS pair

$A = (\mathcal{U}, \mathcal{S}_A)$  and  $B = (\mathcal{U}, \mathcal{S}_B)$  are ISS on same universe  $\mathcal{U}$

# Compatible ISS pair

$A = (\mathcal{U}, \mathcal{S}_A)$  and  $B = (\mathcal{U}, \mathcal{S}_B)$  are ISS on same universe  $\mathcal{U}$

$(A, B)$  are **compatible ISS pair** if there is an efficiently computable bijection  $f: \mathcal{S}_A \rightarrow \mathcal{S}_B$  such that

- For all  $s \in \mathcal{S}_A$ ,  $s$  and  $f(s)$  forms a partition of  $\mathcal{U}$
- For all  $s \in \mathcal{S}_A$ ,  $A_s := (\mathcal{U}, (\mathcal{S}_A \setminus \{s\}) \cup \{f(s)\})$  is an ISS

$s$  and  $f(s)$  are complements of each other

# Compatible ISS pair

Compact Universe!

**Lemma:**

For even  $N \geq 2$ , we can compute a compatible ISS pair  $(A, B)$  on  $N$  elements each having  $2^{\frac{N}{2}-1}$  sets in polynomial time.

# Compatible ISS pair

Compact Universe!

## Lemma:

For even  $N \geq 2$ , we can compute a compatible ISS pair  $(A, B)$  on  $N$  elements each having  $2^{\frac{N}{2}-1}$  sets in polynomial time.

**Proof:** Greedily pick  $N/2$ -sized sets of  $[N]$  in  $S_A$  and their complements in  $S_B$ .

$$s \in S_A : f(s) = \bar{s} \in S_B$$

# Compatible ISS pair - Gadget

## Lemma:

For even  $N \geq 2$ , we can compute a compatible ISS pair  $(A, B)$  on  $N$  elements each having  $2^{\frac{N}{2}-1}$  sets in polynomial time.

$$n := |V|$$

Let  $(A = (X, \mathcal{S}_A), B = (X, \mathcal{S}_B))$  be a compatible ISS pair on  $N = 10 \log n$  elements in  $X$

$$|\mathcal{S}_A| = |\mathcal{S}_B| > n$$

# Construction: $(\mathcal{U}, \mathcal{S}, r)$ using $(A, B)$

Compact Set Packing

- $(G = (V, E), k, H)$  ← instance of  $k$ -Clique  $V = \{v_1, \dots, v_n\}$
- $(A = (X, \mathcal{S}_A), B = (X, \mathcal{S}_B))$  ← compatible ISS pair on  $N = 10 \log n$  elements in  $X$
- For each vertex  $v_i \in V$ , assign a unique set  $s^i \in \mathcal{S}_A$   $|\mathcal{S}_A| = |\mathcal{S}_B| > n$

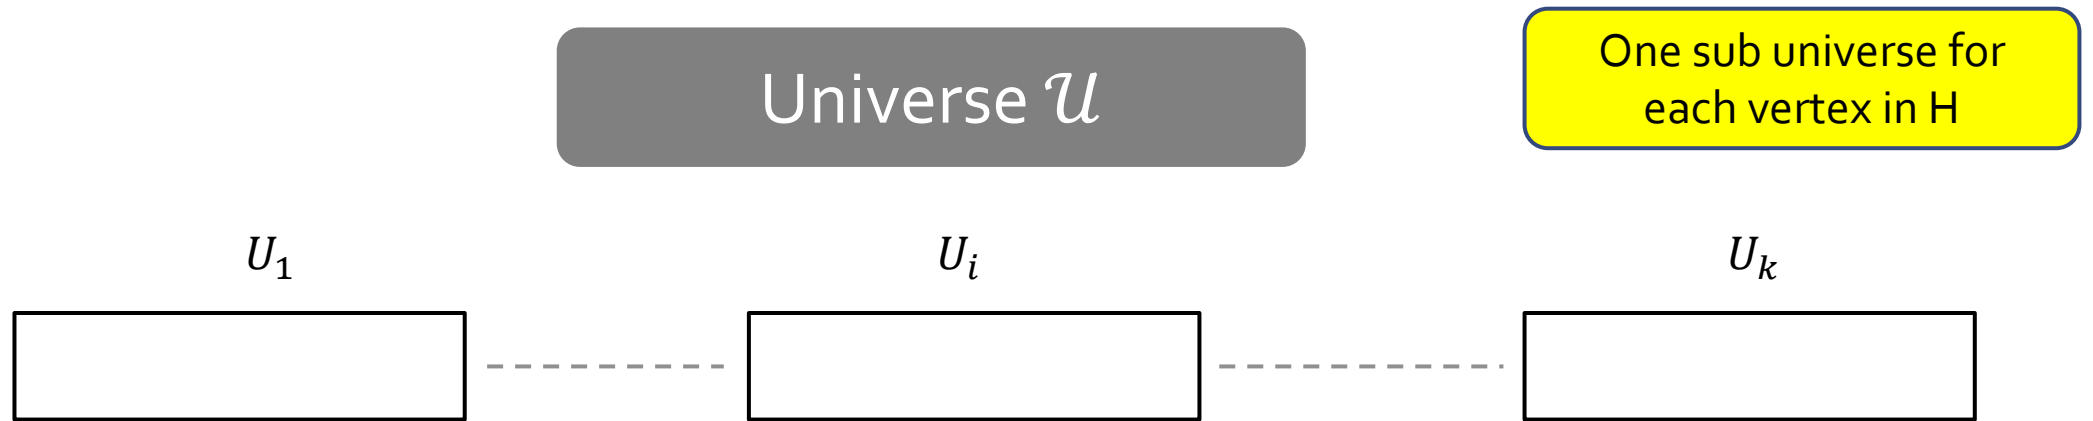

# Construction: $(\mathcal{U}, \mathcal{S}, r)$ using $(A, B)$

For each vertex  $v_i \in V$ , assign a unique set  $s^i \in \mathcal{S}_A$

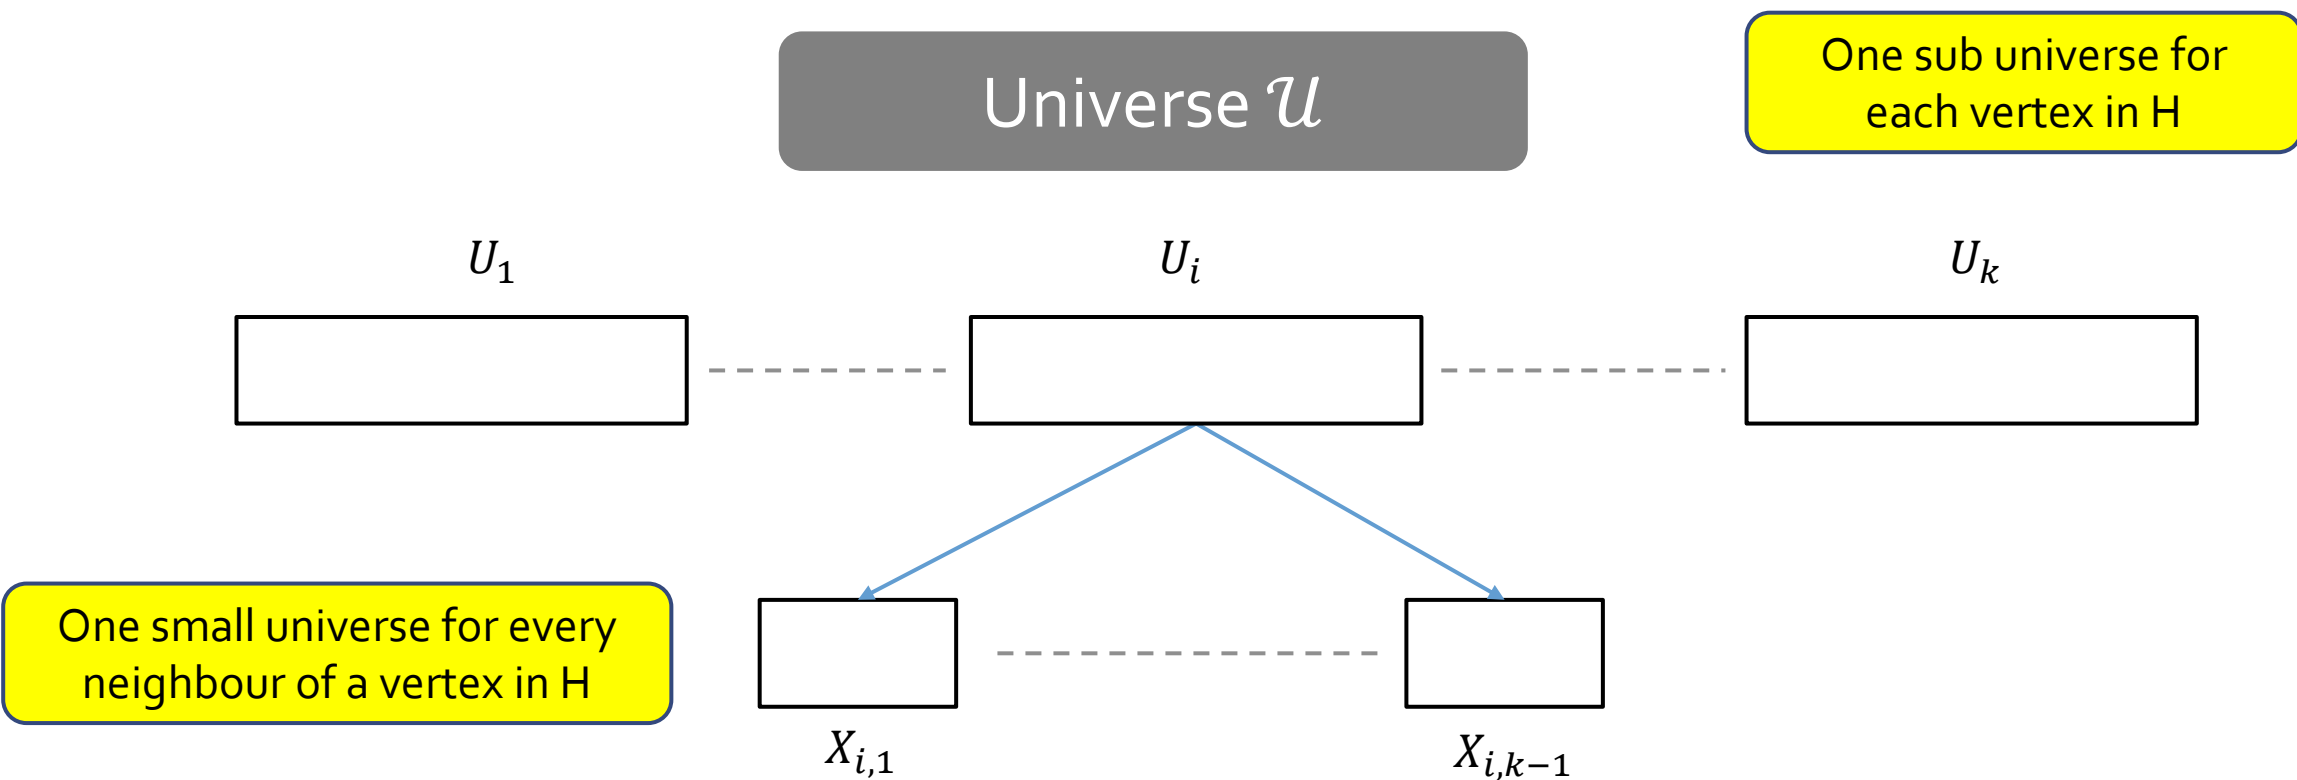

$$|\mathcal{S}_A| = |\mathcal{S}_B| > n$$

We will use  $k(k - 1)$  copies of  $(A, B)$  on  $X$

# Construction: $(\mathcal{U}, \mathcal{S}, r)$ using $(A, B)$

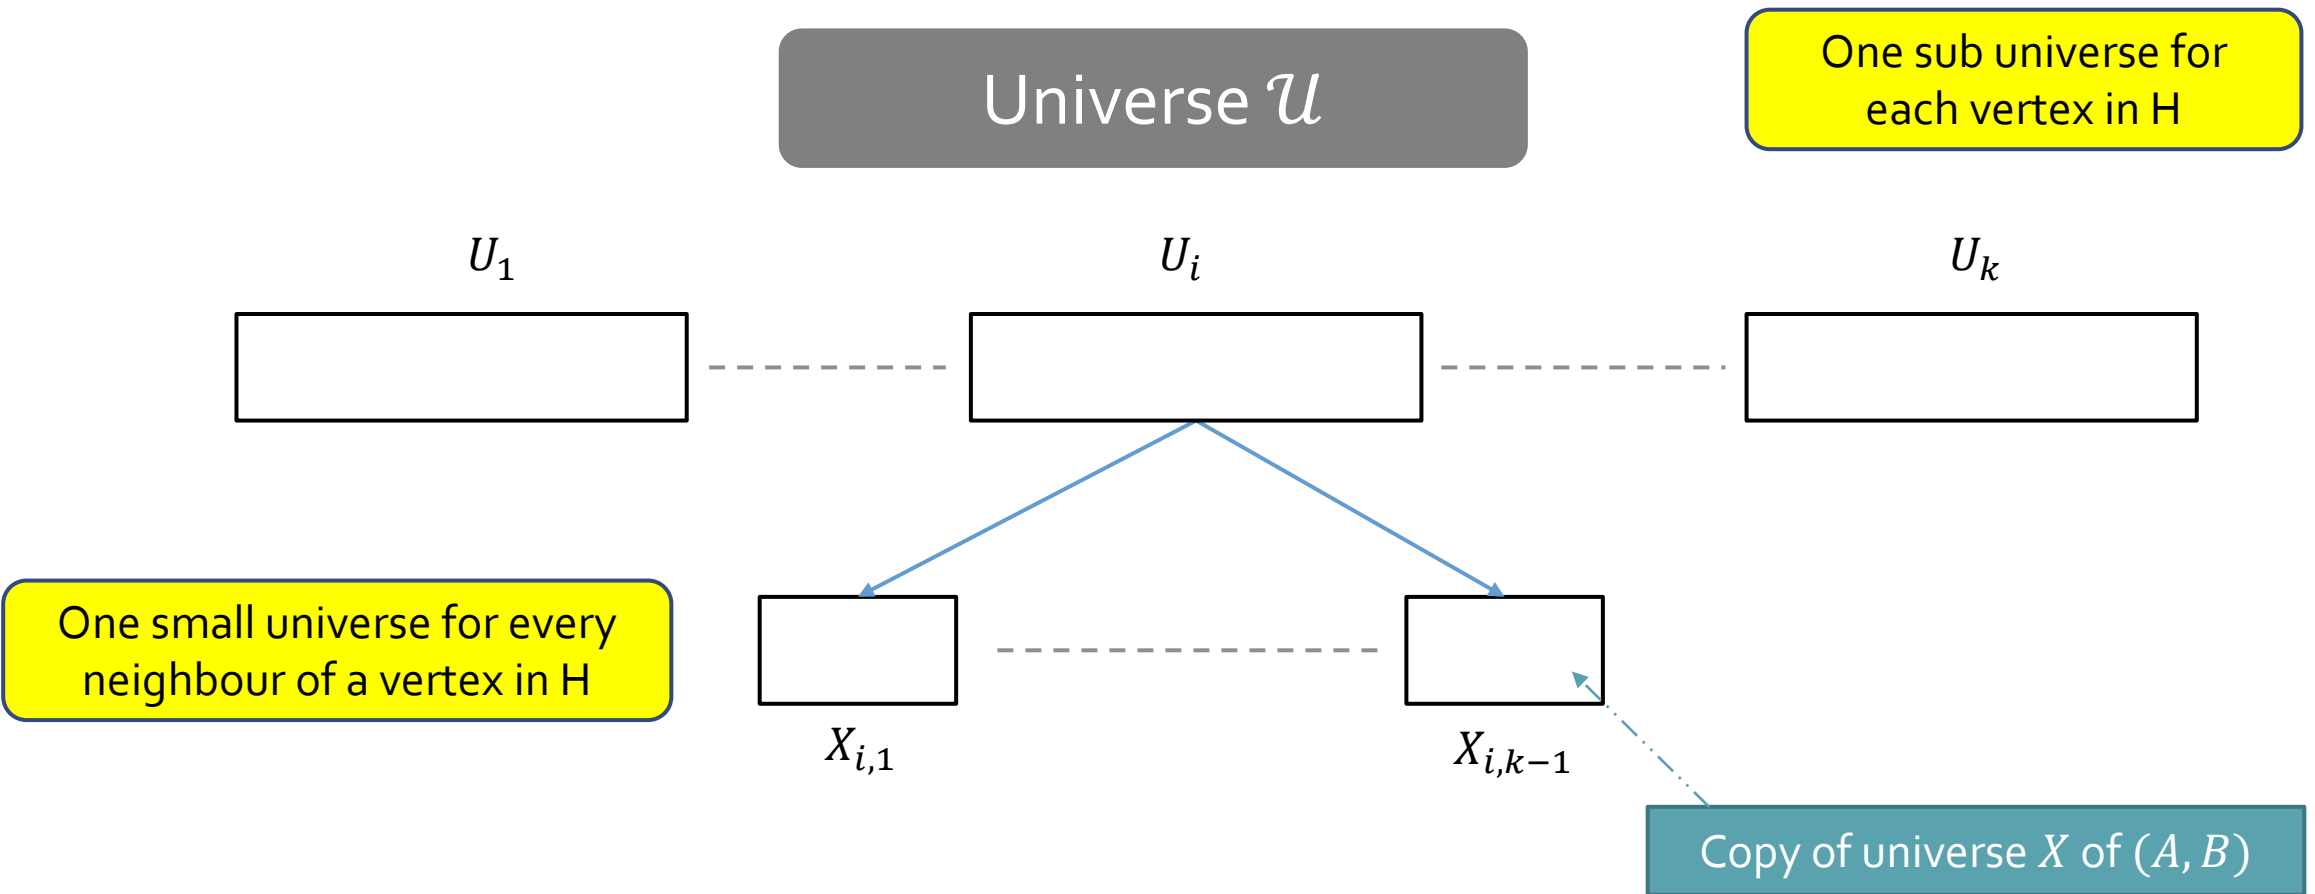

# Construction: $(\mathcal{U}, \mathcal{S}, r)$ using $(A, B)$

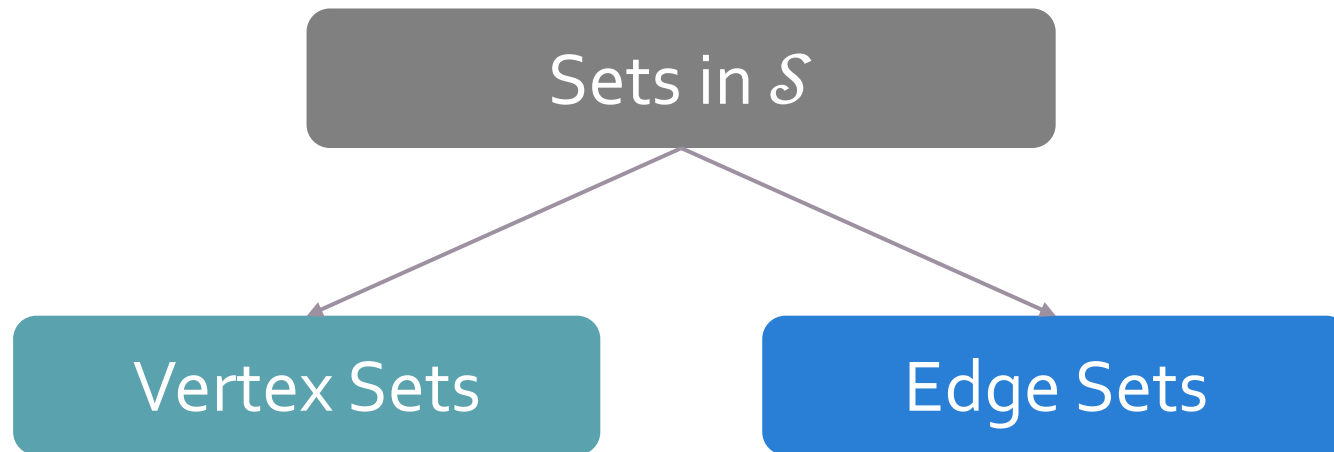

# Construction: $(\mathcal{U}, \mathcal{S}, r)$ using $(A, B)$
